PARENT AND FAMILY MEETING

Topic: Unlocking Possibilities: Assistive Technology and Family Resources

Presenter: *Wendy Davis, Director of Marketing and Research, Pennsylvania Assistive Technology Foundation (PATF)*

Assistive Technology encompasses much more than what we typically think of as "technology." It can include high-tech devices as well as low-tech solutions such as a fence to help prevent elopement for children with autism or a paper communication board. These resources are designed to help individuals access the assistive technology, services, and supports needed to increase their independence and enhance their quality of life.

Wendy will introduce us to PATF, share more about the important work they do, and highlight the many resources they offer to individuals of all ages with disabilities. She'll also provide insight into how PATF supports individuals in navigating available opportunities, building greater independence, and accessing the tools and resources they need to thrive.
